Without light space and places are not perceptible. Different light intensity has varied effect on man, Proper lighting situation motivates human to show their activities. The interaction of light and space can make a favorable environment and beautiful result. It means that sometimes by keeping the space and have changeable light and in some cases having same light and change the space – same as sunlight operation- can create visual diversity.

Light not only has interaction with space, but also with color. It can be seen in traditional architecture at different spaces such as Bazaar, and making use of colorful glasses for building.

In this article, use of light in Iranian urban planning to create a favorable space and also in the contemporary world has been studied.
